

The Ultimate 2-Hour Coordinator Training Script

Convener Instructions: This document contains the **Live Roleplay Gauntlet**. You will sit on one side of the room, and the 40 coordinators on the other. You will pitch these 8 dummy ideas. For each idea, they must rapid-fire 15 questions at you.

Below is exactly what you should answer. For EVERY question, you have 3 different alternative answers. If a coordinator rejects your first answer, hit them with Option 2 or Option 3!

Scenario 1: E-Commerce (The College Food Delivery App)

You Pitch: "I am building an app like Swiggy, but only for our college canteen."

Simple Questions (Level 1):

1. Who is going to do the physical delivery?
 - (Opt 1: I will hire 1st-year students looking for pocket money).
 - (Opt 2: Students deliver 5 orders in exchange for 1 free meal).
 - (Opt 3: We will partner with hostel security guards to drop food at the gates).
2. What is the delivery fee?
 - (Opt 1: A flat 10 Rupees per order).
 - (Opt 2: Free delivery, but we mark up the food menu by 10%).
 - (Opt 3: A 100 Rupee monthly subscription for unlimited deliveries).
3. How do students pay? Cash or UPI?
 - (Opt 1: UPI only, to avoid fake orders).
 - (Opt 2: A built-in digital wallet they recharge every month).
 - (Opt 3: Cash on Delivery for the first week to build trust).
4. How does the canteen receive the order?
 - (Opt 1: We will give them a cheap Android tablet).
 - (Opt 2: An automated WhatsApp bot sends messages to the chef's phone).
 - (Opt 3: A Bluetooth printer that automatically prints tickets in the kitchen).
5. Are you delivering to classrooms or just hostels?
 - (Opt 1: Hostels only, to avoid disturbing classes).
 - (Opt 2: Specific drop-off zones outside the academic blocks).
 - (Opt 3: Everywhere, but classroom deliveries cost 20 Rupees extra).

Medium Questions (Level 2): 6. If the food is 50 Rs, and you charge 10 Rs, how do you make enough profit?

- (Opt 1: Massive volume—if we do 500 orders a day, it adds up).
 - (Opt 2: We negotiate a 15% discount from the canteen for bringing them bulk orders).
 - (Opt 3: We run ads on the app for local PG accommodations).
7. What happens if the delivery personnel steal or eat the food?
 - (Opt 1: We ban them from the app permanently).
 - (Opt 2: We use tamper-proof tape on the food boxes).
 - (Opt 3: The delivery boy must deposit 500 Rs with us before they start working).
 8. If a student cancels the order while the food is in transit, who pays the canteen?
 - (Opt 1: The student's account is suspended until they pay the fine).
 - (Opt 2: We don't allow cancellations after 2 minutes).
 - (Opt 3: We sell the canceled food at a 50% discount on the app's 'Flash Sale' page).

9. How do you prevent the food from getting cold during delivery?
- (Opt 1: We provide insulated delivery bags).
 - (Opt 2: Deliveries are restricted to a 500-meter radius only).
 - (Opt 3: We only deliver dry items (puffs, chips) during peak hours).
10. What if 100 people order at exactly 1:00 PM? How does your system handle the crash?
- (Opt 1: We use AWS auto-scaling servers).
 - (Opt 2: The app automatically pauses new orders when the queue reaches 50).
 - (Opt 3: We implement 'Scheduled Ordering' where they must order before 11:00 AM).

Hard Questions (Level 3): 11. **The MVP:** Building an app takes three months. Why can't we test this today by simply making a WhatsApp group?

- (Opt 1: WhatsApp is too messy for tracking 100 orders).
 - (Opt 2: An app looks more professional to investors).
 - (Opt 3: I am using a 'No-Code' app builder, so I can launch the app tomorrow).
12. **Liability:** If a student contracts food poisoning, who is legally responsible?
- (Opt 1: The canteen, we are just a delivery partner).
 - (Opt 2: We put a legal waiver in the Terms of Service).
 - (Opt 3: We force the canteen to show us their FSSAI hygiene certificate first).
13. **Competition:** What happens when real food delivery apps secure permission to deliver inside the campus?
- (Opt 1: We will always have cheaper delivery fees).
 - (Opt 2: Swiggy won't deliver directly to a hostel dorm room door; we will).
 - (Opt 3: We will get an exclusive contract from the Principal).
14. **Licensing:** Do you require an FSSAI food license to operate a delivery business?
- (Opt 1: No, because we don't cook the food).
 - (Opt 2: Yes, we will apply for a basic 100 Rs/year vendor license).
 - (Opt 3: We operate under the canteen's existing license).
15. **Scale:** How does this business scale beyond our single college campus?
- (Opt 1: We will franchise the app to students in other colleges).
 - (Opt 2: We pivot and sell the software code directly to restaurants).
 - (Opt 3: We don't scale; we just dominate this one campus and sell the company).
-

Scenario 2: Hardware / IoT (The Smart AC Helmet)

You Pitch: "I am building a motorcycle helmet with a built-in Air Conditioner."

Simple Questions (Level 1):

1. Where is the battery located?
- (Opt 1: Inside the back of the helmet).
 - (Opt 2: A wire connects to a battery pack kept in the rider's pocket).
 - (Opt 3: It plugs directly into the motorcycle's USB port).
2. Is the helmet waterproof?
- (Opt 1: Yes, IP67 rated).
 - (Opt 2: We provide a cheap plastic rain cover).
 - (Opt 3: The electronics are sealed in silicone).
3. How long does the battery last on a single charge?

- (Opt 1: 2 hours of continuous cooling).
 - (Opt 2: It only turns on when the rider stops at a traffic light, saving battery).
 - (Opt 3: The battery is swappable at petrol pumps).
4. Does the AC mechanism generate excessive noise?
- (Opt 1: We use noise-canceling foam inside).
 - (Opt 2: It's quieter than the sound of traffic).
 - (Opt 3: We include built-in Bluetooth speakers to drown out the noise).
5. How do you charge it?
- (Opt 1: Standard USB-C).
 - (Opt 2: Solar panels on top of the helmet).
 - (Opt 3: Kinetic charging from wind resistance while riding).

Medium Questions (Level 2): 6. An AC compressor is inherently heavy. How heavy will this helmet be?

- (Opt 1: We use Peltier cooling plates, which are very light).
 - (Opt 2: We counter-balance the weight so it doesn't hurt the neck).
 - (Opt 3: It is only 500 grams heavier than a normal helmet).
7. How much will it cost the end consumer?
- (Opt 1: 15,000 Rupees).
 - (Opt 2: We sell the helmet at cost (5,000 Rs) and charge a subscription for filter replacements).
 - (Opt 3: We partner with Zomato to buy them in bulk for their drivers).
8. Air conditioners exhaust hot air. Where does the thermal exhaust go?
- (Opt 1: Out through aerodynamic vents in the back).
 - (Opt 2: It is pushed upwards away from the rider).
 - (Opt 3: We use a water-cooling loop that absorbs the heat).
9. What happens if the lithium battery explodes in a crash?
- (Opt 1: We use solid-state batteries which do not explode).
 - (Opt 2: The battery is housed in a fireproof Kevlar pouch).
 - (Opt 3: As mentioned, the battery is in the rider's pocket, not the helmet).
10. Does the cold air cause the visor to fog up?
- (Opt 1: We use a pin-lock anti-fog visor).
 - (Opt 2: The airflow is directed strictly at the neck, not the face).
 - (Opt 3: A tiny heating element on the glass prevents fog).

Hard Questions (Level 3): 11. **The MVP:** Hardware prototyping costs lakhs. How do you test this today?

- (Opt 1: Run Facebook ads with a 3D render to see if people click 'Pre-Order').
- (Opt 2: Tape small computer fans inside an old helmet and ask friends to wear it).
- (Opt 3: Interview 50 Rapido drivers in the sun).

12. **Certification:** How will you pass strict ISI/BIS crash tests with a hollowed-out helmet?

- (Opt 1: We only modify the outer shell, leaving the EPS safety foam intact).
- (Opt 2: We use carbon fiber to maintain structural integrity).
- (Opt 3: We sell it as an 'add-on accessory' rather than a full helmet to bypass laws).

13. **Physics:** Is a miniature battery-powered fan genuinely strong enough to combat 45-degree heat?

- (Opt 1: It drops the perceived temperature by 5 degrees, which is enough to stop sweating).
- (Opt 2: It uses a wet sponge (evaporative cooling) which is highly effective in dry heat).
- (Opt 3: It cools the blood vessels in the neck, tricking the brain into feeling cold).

14. **Liability:** If a biker crashes and the compressor causes severe injury, who gets sued?

- (Opt 1: We have a massive legal waiver in the box).
- (Opt 2: The parts are designed to break away (eject) instantly upon heavy impact).
- (Opt 3: We buy commercial liability insurance).

15. **Manufacturing:** How do you manufacture 1,000 units?

- (Opt 1: Outsource the plastic molding to a factory in China).
- (Opt 2: Partner with an existing Indian helmet brand like Studds).
- (Opt 3: 3D print them locally in small batches to start).

Scenario 3: Generative AI (The AI Resume Writer)

You Pitch: "I am building an AI website that automatically writes a perfect engineering resume."

Simple Questions (Level 1):

1. Who is your exact target audience?
 - (Opt 1: Final year engineering students).
 - (Opt 2: People applying for high-level tech jobs).
 - (Opt 3: Students who don't speak perfect English).
2. Is the service free or paid?
 - (Opt 1: 100 Rupees per download).
 - (Opt 2: Freemium (Free PDF, pay 50 Rs for the Word format)).
 - (Opt 3: 100% free, we make money by showing them ads for courses).
3. Does it export as a PDF or Word Document?
 - (Opt 1: PDF only, so formatting doesn't break).
 - (Opt 2: Both PDF and DOCX).
 - (Opt 3: It creates a live web-link (URL) they can send to recruiters).
4. Is the website mobile-friendly?
 - (Opt 1: Yes, it is a Progressive Web App).
 - (Opt 2: Yes, they can build the resume entirely on their phone).
 - (Opt 3: No, we force them to use a laptop for better formatting).
5. How does the AI know my skills?
 - (Opt 1: You type a rough paragraph into a text box).
 - (Opt 2: You paste your LinkedIn profile URL).
 - (Opt 3: You upload your old, bad resume and it rewrites it).

Medium Questions (Level 2): 6. ChatGPT already writes resumes perfectly for free. Why would anyone pay you?

- (Opt 1: Mine automatically places the text into a beautiful design template).
 - (Opt 2: Mine is specifically trained on exactly what Amazon/Google recruiters want).
 - (Opt 3: Students are lazy and want a 'One-Click' solution, not prompt engineering).
7. Are the generated resumes ATS (Applicant Tracking System) friendly?
 - (Opt 1: Yes, we use standard single-column text templates).
 - (Opt 2: We include an 'ATS Score Checker' feature built-in).
 - (Opt 3: Yes, we strip out all complex graphics that confuse ATS bots).
 8. If 1,000 students use your app, won't they all have identical resumes?
 - (Opt 1: The AI randomizes the adjectives and phrasing every time).
 - (Opt 2: We have 50 different design templates).
 - (Opt 3: We prompt the AI to focus heavily on their unique personal projects).
 9. Where is the users' private data securely stored?

- (Opt 1: Encrypted on AWS servers).
- (Opt 2: We don't store it; the data is deleted immediately after download).
- (Opt 3: It is saved locally on their own browser's cache).

10. Does the platform support multiple languages?

- (Opt 1: Only English, as tech jobs require it).
- (Opt 2: Yes, we use OpenAI's translation API to support 10 languages).
- (Opt 3: We support regional Indian languages for government job resumes).

Hard Questions (Level 3): 11. **Hallucinations:** If your AI inserts fake skills, and they get fired, are you legally liable?

- (Opt 1: The user must click a checkbox saying they manually verified the text).
- (Opt 2: We prompt the AI strictly to never invent skills not provided in the input).
- (Opt 3: Our AI highlights all generated text in yellow so the user must review it).

12. **The Pivot:** Can you sell this as a B2B SaaS platform to the College Placement Cell?

- (Opt 1: Yes, colleges can buy a 1 Lakh/year license for all students).
- (Opt 2: Yes, and it will give the college a dashboard to track all student resumes).
- (Opt 3: No, colleges are too slow to buy software; B2C to students is faster).

13. **API Costs:** How will you afford OpenAI API costs if 10,000 people use it?

- (Opt 1: The 100 Rupee fee covers the 2 Rupee API cost).
- (Opt 2: We use smaller, cheaper open-source models like Llama 3).
- (Opt 3: We limit free users to 3 generations per day).

14. **The MVP:** Can you test this manually today?

- (Opt 1: Yes, I can take 5 students' data and do the ChatGPT prompting manually).
- (Opt 2: Yes, by putting up a Google Form and emailing them the results).
- (Opt 3: I can set up a stall in the canteen today and do it live).

15. **Defensibility:** What prevents a 1st-year CSE student from cloning your website?

- (Opt 1: Nothing, but our UX/UI design will be far superior).
- (Opt 2: We will build a massive TikTok marketing presence they can't copy).
- (Opt 3: We will sign exclusive partnerships with coding bootcamps).

Scenario 4: MedTech (The AI Skin Disease Scanner)

You Pitch: "I am building an app where you take a photo of your skin, and the AI diagnoses if you have cancer."

Simple Questions (Level 1):

1. Is this application intended for doctors or the general public?
 - (Opt 1: The general public at home).
 - (Opt 2: Rural nurses who don't have specialist training).
 - (Opt 3: Dermatologists, as a 'second opinion' tool).
2. Do you need an active internet connection to process the image?
 - (Opt 1: Yes, the AI runs on the cloud).
 - (Opt 2: No, the AI model is compressed and runs locally on the phone).
 - (Opt 3: It works offline and syncs the results when they get internet).
3. Does the AI work accurately across all skin tones?
 - (Opt 1: Yes, we specifically trained it on South Asian skin datasets).
 - (Opt 2: It is currently better on lighter skin, but we are fixing it).

- (Opt 3: We force the camera to adjust lighting before taking the picture).
4. What is the pricing model?
- (Opt 1: Free, supported by pharmaceutical ads).
 - (Opt 2: 50 Rupees per scan).
 - (Opt 3: The scan is free, but you pay 500 Rs to talk to a doctor afterward).
5. How long does the diagnostic scan take?
- (Opt 1: 5 seconds).
 - (Opt 2: Instantly, using the phone's NPU).
 - (Opt 3: 24 hours, because a human doctor actually double-checks the AI).

Medium Questions (Level 2): 6. Where are you sourcing the thousands of verified medical photographs needed to train this AI?

- (Opt 1: Open-source datasets like ISIC).
 - (Opt 2: We partnered with a local medical college).
 - (Opt 3: We scrape images from Reddit dermatology forums).
7. How does a blurry photo affect the AI's diagnosis?
- (Opt 1: The app has an auto-focus check and rejects blurry photos).
 - (Opt 2: We use AI upscaling to fix the image before scanning).
 - (Opt 3: The app uses the phone's macro lens automatically).
8. Does a licensed human doctor verify the AI's results before the patient is notified?
- (Opt 1: No, the AI gives an instant probability score).
 - (Opt 2: Yes, a doctor reviews all 'High Risk' flags).
 - (Opt 3: Only if the user pays for the premium tier).
9. What is your statistical false-positive rate?
- (Opt 1: Around 5%, but we prefer false positives over missing real cancer).
 - (Opt 2: It is equal to a 3rd-year medical student's accuracy).
 - (Opt 3: We only give a 'Seek Medical Attention' warning, not a definitive diagnosis).
10. Where is this highly sensitive medical data being stored?
- (Opt 1: We don't store it; the photo is deleted immediately after the scan).
 - (Opt 2: On HIPAA-compliant AWS health servers).
 - (Opt 3: It is saved purely on the user's local phone storage).

Hard Questions (Level 3): 11. **Legality:** What if your AI tells a patient they are healthy, but they actually have cancer?

- (Opt 1: A massive disclaimer stating 'This is not medical advice').
- (Opt 2: We never say 'You are healthy'; we say 'No abnormalities detected').
- (Opt 3: We force them to agree to a strict Terms of Service waiver).

12. **Regulations:** Have you applied for CDSCO (Indian FDA) approval for medical software?

- (Opt 1: We classify it as an 'Educational App' to bypass medical regulations).
- (Opt 2: Yes, we are entering the clinical trial phase next year).
- (Opt 3: We are partnering with an existing hospital to use their licenses).

13. **The Pivot:** Could the app simply connect the user to a real dermatologist instead?

- (Opt 1: Yes, the AI acts as a lead generator for paid telemedicine appointments).
- (Opt 2: Yes, doctors pay us a commission for sending them patients).
- (Opt 3: We will build a directory of local clinics directly into the app).

14. **Malpractice:** Who is paying the exorbitant medical malpractice insurance premiums?

- (Opt 1: We operate out of a country with relaxed AI medical laws).
- (Opt 2: We do not provide diagnoses, so we don't need malpractice insurance).
- (Opt 3: We are raising 1 Crore in VC funding strictly for legal defense).

15. **The MVP:** How do you test if people actually want this today without writing AI code?

- (Opt 1: Put up posters asking people to WhatsApp photos of skin issues, and have a medical student answer).
- (Opt 2: Create a landing page and see how many people click 'Download').
- (Opt 3: Survey 100 people at a pharmacy).

Scenario 5: EdTech (The Blockchain Degree Generator)

You Pitch: "I want to put all college degrees on the Blockchain so they cannot be forged."

Simple Questions (Level 1):

1. What exact problem does this solve for the institution?
 - (Opt 1: It stops students from photoshopping fake grades).
 - (Opt 2: It allows employers to verify degrees instantly with one click).
 - (Opt 3: It saves the college money on printing high-security physical paper).
2. Who pays for the service?
 - (Opt 1: The college pays a yearly SaaS fee).
 - (Opt 2: The student pays a one-time 500 Rupee minting fee upon graduation).
 - (Opt 3: Employers pay us a small fee every time they want to verify a candidate).
3. Which specific blockchain network are you utilizing?
 - (Opt 1: Polygon, because the gas fees are pennies).
 - (Opt 2: A private Hyperledger network controlled by the government).
 - (Opt 3: Solana, for instant transaction speeds).
4. Is the ledger public or private?
 - (Opt 1: Public, so anyone can verify the hash).
 - (Opt 2: Private, accessible only by accredited universities).
 - (Opt 3: A hybrid model where the data is encrypted but the verification is public).
5. Who is responsible for entering the grades into the blockchain?
 - (Opt 1: The university exam branch).
 - (Opt 2: Our system automatically pulls it from the college database).
 - (Opt 3: The professors upload it via a secure portal).

Medium Questions (Level 2): 6. Why utilize expensive Blockchain instead of a secure, digitally signed PDF?

- (Opt 1: Because a PDF signature can expire, but a blockchain record is forever).
 - (Opt 2: Blockchain generates more hype and funding).
 - (Opt 3: It prevents the college itself from altering historical records).
7. What happens if a student loses their crypto wallet private keys?
 - (Opt 1: We use 'Soulbound Tokens' tied to their identity, not a wallet password).
 - (Opt 2: The college retains an admin key to re-issue access).
 - (Opt 3: They login using a standard Email/Password, we manage the wallet in the background).
 8. Who pays the transaction "Gas Fees"?
 - (Opt 1: The college pays it as part of their graduation budget).
 - (Opt 2: We absorb the cost because Polygon fees are almost zero).
 - (Opt 3: The student pays it).
 9. What happens if a teacher enters the wrong grade? Blockchains are immutable.

- (Opt 1: We issue a new 'V2' token and revoke the smart contract of the old one).
- (Opt 2: We use a 7-day holding period before finalizing the block).
- (Opt 3: The blockchain only stores a hash; the actual grade can be updated in the main database).

10. Are there vulnerabilities in your smart contracts?

- (Opt 1: We use standard, heavily audited OpenZeppelin contracts).
- (Opt 2: We will hire a third-party security firm to audit the code).
- (Opt 3: We run a bug bounty program).

Hard Questions (Level 3): 11. **Adoption:** How do you intend to force the Principal to abandon their current ERP system?

- (Opt 1: We don't replace it; we build an API plugin that works with their current ERP).
- (Opt 2: We offer the first 2 years completely free).
- (Opt 3: We get a mandate from the State Education Board).

12. **Regulation:** Do the UGC and AICTE legally recognize blockchain-issued degrees?

- (Opt 1: Yes, the National Education Policy (NEP) encourages digital credentialing).
- (Opt 2: They will once we prove it works at a pilot college).
- (Opt 3: We issue both a traditional paper degree and the digital one as a backup).

13. **The MVP:** Can you test this concept manually today?

- (Opt 1: Yes, I can mint 10 dummy certificates as NFTs on OpenSea today).
- (Opt 2: I can use a simple Google Sheet and call it a 'ledger' for a pilot test).
- (Opt 3: I can generate QR codes linked to a secure server).

14. **Data Laws:** Under Indian data privacy laws, how do you delete data from an un-deletable blockchain?

- (Opt 1: We only store a cryptographic hash, containing no personal names).
- (Opt 2: We encrypt the data, and to 'delete' it, we simply destroy the decryption key).
- (Opt 3: Academic records are legally exempt from the Right to be Forgotten).

15. **Sales:** Who is the very first Principal you are going to pitch this product to?

- (Opt 1: The Principal of ACE Engineering College).
- (Opt 2: Small, private training institutes that want to look high-tech).
- (Opt 3: My uncle, who runs a chain of junior colleges).

Scenario 6: FinTech (The Student Micro-Loan App)

You Pitch: "I am building an app that issues 500 Rupee micro-loans to students who run out of pocket money."

Simple Questions (Level 1):

- Where is the capital coming from to issue these loans?
 - (Opt 1: My personal savings).
 - (Opt 2: We operate as a P2P platform; rich students lend to broke students).
 - (Opt 3: Angel investors provided a 5 Lakh lending pool).
- What is the maximum allowable loan amount?
 - (Opt 1: Strictly 1,000 Rupees max).
 - (Opt 2: It scales up; they start at 200 Rs and unlock higher amounts if they repay on time).
 - (Opt 3: 5,000 Rupees).
- What is the interest rate?
 - (Opt 1: 0% interest, but a flat 20 Rupee 'processing fee').
 - (Opt 2: 5% per month).

- *(Opt 3: No interest, but if they are late, the penalty fee is massive).*
4. How quickly is the money transferred to the borrower?
- *(Opt 1: Instantly via UPI).*
 - *(Opt 2: Within 24 hours after manual review).*
 - *(Opt 3: The money doesn't go to their bank; it goes directly to the canteen/store as a voucher).*
5. What is the repayment window?
- *(Opt 1: 15 days).*
 - *(Opt 2: At the beginning of the next month when they get pocket money).*
 - *(Opt 3: Flexible, but their credit limit drops the longer they take).*

Medium Questions (Level 2): 6. How do you physically compel them to repay you if they delete the application?

- *(Opt 1: We require the phone numbers of 2 friends as 'guarantors' who we will call).*
 - *(Opt 2: We publicly shame defaulters on a college leaderboard).*
 - *(Opt 3: We require them to link their college email, threatening academic action).*
7. What is your projected default rate?
- *(Opt 1: Less than 5%, as the amounts are too small to risk their reputation over).*
 - *(Opt 2: We expect 20% defaults, which is priced into the fees of those who do pay).*
 - *(Opt 3: Nearly zero, because we only lend to verified seniors).*
8. How do you conduct formal KYC?
- *(Opt 1: Automated Aadhar verification API).*
 - *(Opt 2: They must upload a selfie holding their College ID card).*
 - *(Opt 3: We use their active UPI history to verify identity).*
9. Do you run checks on their CIBIL credit score?
- *(Opt 1: No, this app builds their first alternative credit score).*
 - *(Opt 2: Yes, we use a lightweight credit bureau API).*
 - *(Opt 3: We analyze their SMS data to see if they pay phone bills on time).*
10. What protocol is in place if the student changes their phone number?
- *(Opt 1: We track their device's unique MAC address).*
 - *(Opt 2: We track their college roll number).*
 - *(Opt 3: We require an alternate email address during sign-up).*

Hard Questions (Level 3): 11. **Licensing:** Lending money formally requires RBI NBFC licenses. How are you operating legally?

- *(Opt 1: We partner with a licensed NBFC and act only as the tech front-end).*
- *(Opt 2: Since we don't charge interest (only flat fees), it falls under a legal grey area).*
- *(Opt 3: We operate it as a 'closed-loop' wallet for campus stores only).*

12. **Usury:** Charging high flat fees is considered loan sharking. How do you legally justify this?

- *(Opt 1: We classify it as a software 'Platform Fee', not interest).*
- *(Opt 2: The borrower explicitly agrees to it as a late penalty).*
- *(Opt 3: We will lower the fees once we have enough scale).*

13. **Harassment:** If you contact their friends to recover funds, can you be sued for harassment?

- *(Opt 1: The user explicitly consents to this in the Terms and Conditions).*
- *(Opt 2: We use automated polite SMS reminders, not aggressive phone calls).*
- *(Opt 3: We won't actually call them; the threat alone is usually enough).*

14. **The MVP:** Can you test this assumption today?

- (Opt 1: Yes, I can lend 100 Rs to 5 classmates via GPay and track repayments in Excel).
- (Opt 2: I can run a survey to see how often students run out of cash).
- (Opt 3: Set up a physical 'cash advance' desk in the canteen for one day).

15. **Disaster:** What is your contingency plan if zero students repay you on Day 30?

- (Opt 1: The business goes bankrupt; that's startup risk).
 - (Opt 2: We shut down the app and sell the bad debt to a recovery agency).
 - (Opt 3: We only lend 10% of our total capital on the first run to limit exposure).
-

Scenario 7: GreenTech (The Smart Dustbin)

You Pitch: "I am building a smart dustbin that automatically sorts dry and wet waste."

Simple Questions (Level 1):

- What technology makes this dustbin 'smart'?
 - (Opt 1: A camera with image recognition AI).
 - (Opt 2: Moisture sensors to detect wet waste).
 - (Opt 3: RFID tags that read barcode data on packaging).
- Where does it draw power from?
 - (Opt 1: It plugs directly into a wall outlet).
 - (Opt 2: Solar panels on the lid).
 - (Opt 3: A rechargeable battery that lasts a week).
- Is it designed for indoor or outdoor usage?
 - (Opt 1: Indoors only, like malls and airports).
 - (Opt 2: Heavy-duty steel versions for public parks).
 - (Opt 3: Small versions for household kitchens).
- What are its physical dimensions?
 - (Opt 1: Standard 50-liter commercial bin size).
 - (Opt 2: Massive industrial size for apartment complex basements).
 - (Opt 3: Compact enough to fit under a desk).
- Who is the primary target buyer?
 - (Opt 1: Smart cities and municipalities).
 - (Opt 2: Large corporate IT parks).
 - (Opt 3: Eco-conscious luxury homeowners).

Medium Questions (Level 2): 6. How often does the camera lens become obscured by wet garbage?

- (Opt 1: It has a mechanical self-cleaning wiper).
 - (Opt 2: The camera is positioned at a steep angle away from the splash zone).
 - (Opt 3: It relies on weight and moisture sensors instead if the camera is blocked).
- What is the mechanical lifespan of the robotic sorting arm?
 - (Opt 1: It uses a simple trapdoor mechanism, not an arm, so it rarely breaks).
 - (Opt 2: Rated for 100,000 actuations before needing maintenance).
 - (Opt 3: The motors are easily replaceable modules).
 - How do you protect the unit from theft or vandalism?
 - (Opt 1: It is bolted into the concrete floor).
 - (Opt 2: It has an anti-tamper alarm and GPS tracking).
 - (Opt 3: We only place them in highly secure private malls).
 - What is the verified accuracy percentage of the sorting algorithm?

- (Opt 1: Currently 85% accurate, getting better every day).
- (Opt 2: 95% on dry waste, struggles slightly with mixed wet waste).
- (Opt 3: If it is unsure, it defaults to the 'mixed' bin).

10. Does the unit emit foul odors because the mechanical sorting process takes time?

- (Opt 1: The lid seals airtight after every insertion).
- (Opt 2: It contains an activated carbon filter).
- (Opt 3: It sprays a micro-mist of deodorizer periodically).

Hard Questions (Level 3): 11. **Cost ROI:** A smart dustbin costs 50,000 Rs. A standard one costs 500 Rs. Prove they save money.

- (Opt 1: They eliminate the need to hire manual laborers to sort the trash later).
- (Opt 2: The bin compresses the trash, reducing garbage truck pickup frequency by 50%).
- (Opt 3: Perfectly sorted dry waste can be sold to recycling plants for profit).

12. **Procurement:** How will a college student win a massive municipal government contract?

- (Opt 1: We will pilot it for free in a private mall first to build a case study).
- (Opt 2: We partner with a massive waste management corporation like Ramky).
- (Opt 3: We enter government startup competitions to get fast-tracked).

13. **The MVP:** How do you validate that citizens care about this today without building a robot?

- (Opt 1: Build a fake 'smart' bin, hide inside it, and sort the trash by hand to see user interaction).
- (Opt 2: Place two normal bins and see if people actually read the 'Wet' and 'Dry' labels).
- (Opt 3: Ask mall managers if waste sorting fines are a major financial pain point).

14. **E-Waste:** Aren't you contributing to electronic waste by putting chips inside dustbins?

- (Opt 1: Our electronics are 100% modular and recyclable).
- (Opt 2: The environmental benefit of recycling thousands of bottles outweighs one PCB board).
- (Opt 3: We use refurbished smartphone cameras and chips to build them).

15. **Patents:** Have you secured the hardware patents?

- (Opt 1: We are filing a provisional patent next week).
- (Opt 2: We rely on AI software superiority, not hardware patents, to beat copycats).
- (Opt 3: We use open-source hardware and make money on the maintenance contracts).

Scenario 8: Services / Marketplace (The College Fiverr)

You Pitch: "I am building a freelance marketplace exclusively for our college."

Simple Questions (Level 1):

- What is your revenue model?
 - (Opt 1: We take a 10% commission on every transaction).
 - (Opt 2: Freelancers pay 50 Rs to 'boost' their profile).
 - (Opt 3: The platform is free, we sell ads to local cafes).
- What categories of jobs are permitted?
 - (Opt 1: Coding, graphic design, and video editing).
 - (Opt 2: Tutoring and exam prep).
 - (Opt 3: Running errands (like bringing food to the hostel)).
- Do you hold the funds in a secure escrow account?
 - (Opt 1: Yes, the freelancer only gets paid when the job is done).
 - (Opt 2: No, they pay half upfront directly to the freelancer).

- (Opt 3: We use Razorpay's built-in escrow feature).
4. How do users verify they are legitimate students?
- (Opt 1: They must sign up with a .edu college email address).
 - (Opt 2: College ID card photo upload).
 - (Opt 3: They must be invited by an existing verified user).
5. Is this platform a website or a mobile application?
- (Opt 1: A website, because coding is done on laptops).
 - (Opt 2: An Android app).
 - (Opt 3: A Telegram bot).

Medium Questions (Level 2): 6. How do you prevent students from paying in cash offline to avoid your 10% fee?

- (Opt 1: We ban accounts that share phone numbers in the chat).
 - (Opt 2: We offer buyer protection/refunds only if they pay through the app).
 - (Opt 3: The 10% fee is so small that it's worth it for the convenience).
7. What is the dispute resolution process if a buyer claims the work is substandard?
- (Opt 1: We have a manual arbitration team of seniors).
 - (Opt 2: The money is split 50/50 and both accounts get a warning).
 - (Opt 3: We use AI to analyze the chat logs and determine who is right).
8. How do you mitigate the creation of fake 5-star reviews?
- (Opt 1: You can only leave a review if a financial transaction occurred).
 - (Opt 2: Reviews from 1st-year students hold less weight than 4th-year students).
 - (Opt 3: We manually monitor review patterns for fraud).
9. Is there a minimum financial threshold required to withdraw earnings?
- (Opt 1: Yes, 500 Rupees).
 - (Opt 2: No, instant payouts for a 5 Rupee fee).
 - (Opt 3: They can only withdraw once a month).
10. How do you vet and guarantee the quality of the freelancers?
- (Opt 1: They must pass a 10-minute skill quiz before offering services).
 - (Opt 2: The review system naturally filters out bad freelancers).
 - (Opt 3: We manually interview the first 50 freelancers).

Hard Questions (Level 3): 11. **The Chicken and Egg:** How do you acquire buyers when there are no freelancers, and vice versa?

- (Opt 1: I will manually act as a freelancer for the first 50 jobs to guarantee supply).
- (Opt 2: We will onboard 20 top-tier coders before we invite a single buyer).
- (Opt 3: We will pay students 100 Rs just to post a job).

12. **Liability:** If a student hires someone to complete their homework, can you be suspended?

- (Opt 1: We ban 'homework completion' and only allow 'tutoring sessions').
- (Opt 2: We operate anonymously off-campus servers).
- (Opt 3: We actively partner with the college to provide peer-to-peer tutoring).

13. **Margins:** Payment gateways charge a 2% fee. If you only take 10%, how does the business survive?

- (Opt 1: We charge the buyer a 5% platform fee on top of the gig price).
- (Opt 2: We will eventually raise our freelancer fee to 20% like Fiverr).
- (Opt 3: We use UPI, which has zero MDR charges in India).

14. **The MVP:** Can you validate this marketplace today?

- (Opt 1: Yes, I can start a WhatsApp group tonight and act as the manual broker).
- (Opt 2: Yes, I can put up a physical bulletin board in the canteen).
- (Opt 3: Make a simple Google Form where people request services).

15. **Scale:** How do you expand this platform to a second college where you have zero connections?

- (Opt 1: We hire a 'Campus Ambassador' at the second college and pay them a cut).
- (Opt 2: We run localized Instagram ads targeted within a 1km radius of the new college).
- (Opt 3: We open the platform up to become a city-wide student network).

Scenario 9: AgriTech (The AI Crop Disease Drone)

You Pitch: "I am building a drone that flies over farms, takes photos, and uses AI to tell the farmer if the crops have a disease."

Simple Questions (Level 1):

1. Who flies the drone?
 - (Opt 1: The drone flies itself autonomously using GPS).
 - (Opt 2: The farmer flies it using a remote control).
 - (Opt 3: We provide a certified pilot as a service).
2. Does the drone also spray pesticides, or just take photos?
 - (Opt 1: It only takes photos to keep the weight down).
 - (Opt 2: It has a small 5-liter tank for targeted spraying).
 - (Opt 3: It just drops sensors into the soil).
3. How long does the battery last?
 - (Opt 1: 30 minutes per battery).
 - (Opt 2: We use tethered drones with a power cable attached to a generator).
 - (Opt 3: It lands on a solar charging pad in the field).
4. How much does it cost the farmer?
 - (Opt 1: They buy the drone for 1 Lakh).
 - (Opt 2: We charge 500 Rupees per acre scanned).
 - (Opt 3: The drone is free, but they pay a monthly subscription for the AI app).
5. How heavy is the drone?
 - (Opt 1: Under 2 Kgs so it doesn't require a heavy pilot license).
 - (Opt 2: 25 Kgs for the heavy spraying model).
 - (Opt 3: It's a micro-drone, size of a bird).

Medium Questions (Level 2): 6. Rural farmers are notoriously poor. How do they afford this?

- (Opt 1: We don't sell to farmers; we sell to rich landowners).
- (Opt 2: We partner with banks to offer them micro-loans for the drone).
- (Opt 3: The government subsidizes 80% of the cost for AgriTech).

7. What if the drone crashes into a tree and breaks?

- (Opt 1: We provide a 1-year free replacement warranty).
- (Opt 2: It has 360-degree obstacle avoidance sensors).
- (Opt 3: The farmer pays for insurance).

8. Do farmers have strong enough internet in the fields to use your AI app?

- (Opt 1: The AI runs completely offline on the drone's internal chip).
- (Opt 2: It syncs via Bluetooth to their phone when they go back home).
- (Opt 3: It uses satellite internet).

9. How does the AI accurately detect a tiny bug on a leaf from 50 feet in the air?

- (Opt 1: We use hyper-spectral cameras, not normal cameras).
- (Opt 2: The drone flies very low, just 5 feet above the plants).
- (Opt 3: It only detects discoloration in the leaves, not the actual bugs).

10. Does it require a commercial pilot license to operate?

- (Opt 1: Yes, which is why we provide the pilot).
- (Opt 2: No, nano-drones under 250 grams don't need a license).
- (Opt 3: We handle all the DGCA paperwork for the farmer).

Hard Questions (Level 3): 11. **The MVP:** Building a custom drone costs lakhs. How do you test this today?

- (Opt 1: Buy a cheap DJI drone from Amazon and tape a smartphone to it).
- (Opt 2: Have a farmer walk the field and take photos with their phone first).
- (Opt 3: License drone footage from YouTube and run my AI on it).

12. **Regulations:** Drone laws in India (DGCA) are incredibly strict. How do you fly legally?

- (Opt 1: We only operate in 'Green Zones' where permission is not needed).
- (Opt 2: We use Digital Sky API for instant flight approvals).
- (Opt 3: We partner with the State Agriculture Department).

13. **Competition:** Why not just put cameras on the front of a tractor?

- (Opt 1: Tractors compress the soil and damage crops; drones don't touch the ground).
- (Opt 2: Tractors are too slow; a drone scans 10 acres in 10 minutes).
- (Opt 3: Tractors can't see the top of the canopy on tall crops like sugarcane).

14. **Liability:** If the AI misdiagnoses the disease, and the farmer sprays the wrong chemical and kills his entire crop, who gets sued?

- (Opt 1: We have a massive legal waiver that the farmer must sign).
- (Opt 2: We don't recommend chemicals; we just highlight the sick area).
- (Opt 3: We have 5 Crore in commercial liability insurance).

15. **Repair Network:** If a drone breaks in a remote village, who fixes it?

- (Opt 1: We train local mechanics in the village to do basic repairs).
- (Opt 2: We ship them a replacement via courier within 24 hours).
- (Opt 3: It is entirely modular; they just snap a new arm on).

Scenario 10: Social Media (The Anonymous College Confession App)

You Pitch: "I am building an app exclusively for our college where students can post anonymous confessions and gossips without getting caught."

Simple Questions (Level 1):

1. Is the app completely free to use?

- (Opt 1: Yes, 100% free).
- (Opt 2: Free to read, but you pay 10 Rs to post a confession).
- (Opt 3: Free, but you pay to see who 'liked' your post).

2. How do you sign up?

- (Opt 1: With your college .edu email address).
- (Opt 2: No sign up needed, just download and post).

- *(Opt 3: You have to be invited by a current user).*
3. Is it an app or a website?
- *(Opt 1: An Android and iOS App).*
 - *(Opt 2: A Telegram Bot).*
 - *(Opt 3: Just a website, so people don't have to download anything).*
4. Can you post photos, or just text?
- *(Opt 1: Text only, to prevent inappropriate images).*
 - *(Opt 2: Both photos and videos).*
 - *(Opt 3: Photos, but they disappear after 24 hours like Snapchat).*
5. Are professors allowed to join the app?
- *(Opt 1: No, we block faculty email addresses).*
 - *(Opt 2: Yes, they can join but they can't post).*
 - *(Opt 3: We don't know who anyone is, so anyone can join).*

Medium Questions (Level 2): 6. How do you stop cyberbullying and harassment?

- *(Opt 1: We use AI to automatically block curse words and hate speech).*
 - *(Opt 2: If a post gets 5 'reports', it is automatically deleted).*
 - *(Opt 3: We manually approve every single post before it goes live).*
7. How do you make money if the app is free?
- *(Opt 1: We show targeted ads for local cafes and events).*
 - *(Opt 2: We sell anonymous, aggregated mood data to the college).*
 - *(Opt 3: We charge users to 'boost' their confession to the top of the feed).*
8. How do you prove users actually belong to our college?
- *(Opt 1: Geo-fencing; the app only works if your GPS is inside the campus).*
 - *(Opt 2: They must upload a photo of their ID card to an AI verifier).*
 - *(Opt 3: The invite-only system naturally restricts it).*
9. What if someone posts illegal content (like exam paper leaks)?
- *(Opt 1: The AI flags it immediately and bans the device).*
 - *(Opt 2: We have a 24/7 human moderation team).*
 - *(Opt 3: We report it to the authorities).*
10. What are your server costs for hosting thousands of posts?
- *(Opt 1: Text takes up almost zero space; it's very cheap).*
 - *(Opt 2: We use Firebase free tier for the first 10,000 users).*
 - *(Opt 3: We delete all posts after 7 days to save database space).*

Hard Questions (Level 3): 11. **The MVP:** Building a social network takes months. How do you test this today?

- *(Opt 1: I will start an anonymous Instagram page and let people DM me confessions).*
- *(Opt 2: Put a physical 'confession box' in the canteen).*
- *(Opt 3: Create a Google Form linked to a public spreadsheet).*

12. **Legal Liability:** If someone posts a fake rumor ruining a student's life, can the victim sue you for defamation?

- *(Opt 1: We operate as an 'intermediary' under the IT Act, so we are protected).*
- *(Opt 2: We do not store IP addresses, so we can't be forced to reveal them).*
- *(Opt 3: We have strict terms of service that shifts liability to the user).*

13. **The Chicken and Egg:** Social media is boring with no users. How do you get the first 500 people to join?

- (Opt 1: I will fake the first 100 posts myself to make it look active).
- (Opt 2: I will hire the college's most popular students to promote it).
- (Opt 3: I will run a viral marketing campaign by dropping flyers in classrooms).

14. **College Pushback:** What do you do when the Principal bans the app and blocks it on the college Wi-Fi?

- (Opt 1: We build a VPN directly into the app).
- (Opt 2: We rebrand it as a 'Mental Health Support' app to get administration approval).
- (Opt 3: We move to peer-to-peer bluetooth sharing).

15. **Retention:** Once the novelty wears off, why would students keep using it every day?

- (Opt 1: We will introduce a 'Crush Finder' feature for Valentine's Day).
- (Opt 2: Gamification; users earn 'karma' points for good confessions).
- (Opt 3: We add a marketplace feature to buy/sell old textbooks).

Scenario 11: TravelTech (The Student Carpooling App)

You Pitch: "I am building a carpooling app where students who own bikes/cars can give rides to other students going to the same college."

Simple Questions (Level 1):

- Who is driving?
 - (Opt 1: Only 3rd and 4th-year students who have vehicles).
 - (Opt 2: Alumni who work near the college).
 - (Opt 3: Faculty members driving to campus).
- How is payment handled?
 - (Opt 1: The passenger pays the driver directly via UPI).
 - (Opt 2: The app deducts it from a prepaid wallet).
 - (Opt 3: They share the exact petrol cost, not a taxi fare).
- Can girls request strictly female drivers for safety?
 - (Opt 1: Yes, there is a 'Women Only' toggle switch).
 - (Opt 2: We have verified female-only carpools).
 - (Opt 3: All riders and drivers are verified students, making it safer than Uber).
- Are bikes allowed, or just cars?
 - (Opt 1: Bikes, scooters, and cars are all allowed).
 - (Opt 2: Only cars, for safety and weather reasons).
 - (Opt 3: Only electric vehicles to promote green tech).
- What is the platform's commission rate?
 - (Opt 1: We charge zero commission; we run ads instead).
 - (Opt 2: We take a flat 5 Rupees per ride).
 - (Opt 3: We charge the driver a 100 Rs monthly subscription).

Medium Questions (Level 2): 6. What happens if the driver oversleeps and doesn't show up?

- (Opt 1: They get banned from the app after 3 offenses).
- (Opt 2: We immediately hail an Uber for the passenger and bill the driver).
- (Opt 3: We have a backup pool of drivers on standby).

7. What happens if there is an accident on the way to college?

- (Opt 1: The driver's personal vehicle insurance covers it).
- (Opt 2: We provide a micro-insurance policy covering the ride).

- (Opt 3: We have a legal waiver; ride at your own risk).
8. How do you verify the driver's license?
- (Opt 1: They must upload a photo of their license to our AI verifier).
 - (Opt 2: We manually check licenses at a desk in the college).
 - (Opt 3: We integrate with the government Digilocker API).
9. What if the passenger reaches college and refuses to pay?
- (Opt 1: They must pre-pay into the escrow wallet before getting in the car).
 - (Opt 2: The driver rates them 1-star and they get banned).
 - (Opt 3: The college administration helps us enforce discipline).
10. Do you verify the condition of the vehicles?
- (Opt 1: We require a valid Pollution Under Control (PUC) certificate).
 - (Opt 2: Passengers rate the cleanliness of the vehicle).
 - (Opt 3: No, that is too much friction for onboarding).

Hard Questions (Level 3): 11. **The MVP:** App development takes months. How do you test this tomorrow?

- (Opt 1: Create a WhatsApp group where people post their routes and timings).
 - (Opt 2: Put a physical whiteboard in the parking lot).
 - (Opt 3: Use a simple Google Sheet where drivers list their empty seats).
12. **Competition:** Why wouldn't students just use Rapido or Uber Moto?
- (Opt 1: Our app is 50% cheaper because we don't have commercial taxes).
 - (Opt 2: It's safer because you know the driver is from your own college).
 - (Opt 3: It builds a social network; you meet new friends).
13. **Laws:** In India, it is illegal to use a private (white number plate) vehicle for commercial taxi services. How do you avoid the police?
- (Opt 1: We don't charge taxi fares; we strictly call it 'fuel cost sharing').
 - (Opt 2: We operate only within a 5km radius to avoid traffic police).
 - (Opt 3: We limit drivers to a maximum of 2 rides per day).
14. **Liability:** If a driver kidnaps or harasses a passenger, does the college get sued?
- (Opt 1: We are an independent company, not affiliated with the college).
 - (Opt 2: We have an SOS button that alerts the police and parents instantly).
 - (Opt 3: We track the GPS of every single ride in real-time).
15. **Critical Mass:** You need drivers to attract riders, and riders to attract drivers. How do you launch?
- (Opt 1: We will pay 20 seniors out of pocket to act as guaranteed drivers for week 1).
 - (Opt 2: We offer free parking passes at college for anyone who signs up as a driver).
 - (Opt 3: We launch only for one specific hostel to build density).

Scenario 12: FashionTech (The AR Clothing Try-On App)

You Pitch: "I am building an Augmented Reality (AR) app where you can see exactly how a T-shirt looks on your body using your phone camera before you buy it."

Simple Questions (Level 1):

1. Who is the target audience?
- (Opt 1: Teenagers who buy fast fashion online).
 - (Opt 2: High-end luxury shoppers who want custom fits).
 - (Opt 3: Clothing brands that want to reduce their return rates).

2. Does the user need a high-end phone with a LiDAR scanner?
 - (Opt 1: No, it works on any standard smartphone camera).
 - (Opt 2: Yes, it requires an iPhone Pro for accurate depth mapping).
 - (Opt 3: It works via a smart mirror in the actual physical store).
3. Which clothes can you try on?
 - (Opt 1: We are partnering with Zara and H&M for their catalogs).
 - (Opt 2: Only our own custom-made blank T-shirts).
 - (Opt 3: Any clothing if you upload a picture of it).
4. What is the cost to the user?
 - (Opt 1: 100% free for the user; brands pay us).
 - (Opt 2: 99 Rs a month for unlimited try-ons).
 - (Opt 3: We charge a 5% affiliate fee when they buy the clothes).
5. How does the camera see the back of the clothes?
 - (Opt 1: You spin around while holding the phone).
 - (Opt 2: You set the phone on a table and do a 360 turn).
 - (Opt 3: We use AI to hallucinate and guess what the back looks like).

Medium Questions (Level 2): 6. How do you get the 3D models of the clothes into the app?

- (Opt 1: Brands must send us their CAD (design) files).
 - (Opt 2: We physically photograph the clothes from 100 angles (Photogrammetry)).
 - (Opt 3: We use AI to convert standard 2D website photos into 3D models).
7. Does the app accurately measure body size (S, M, L)?
 - (Opt 1: Yes, the AI estimates your measurements based on your height).
 - (Opt 2: No, it's just a visual overlay; you still have to guess your size).
 - (Opt 3: The user has to manually input their chest and waist measurements).
 8. What happens if the lighting in the user's bedroom is terrible?
 - (Opt 1: The AR model will look fake and float over their body).
 - (Opt 2: The app forces them to turn on their flash or move to a window).
 - (Opt 3: Our AI automatically color-corrects the clothing to match the room).
 9. What if the cloth looks great in AR, but doesn't fit in real life?
 - (Opt 1: We offer free returns).
 - (Opt 2: We include a disclaimer that AR is only a 90% accurate estimation).
 - (Opt 3: We simulate fabric physics (like silk vs cotton) to show how it drapes).
 10. Why wouldn't massive brands just build this feature into their own apps?
 - (Opt 1: They don't have the AI talent; they prefer to buy our API).
 - (Opt 2: We aggregate all brands into one app, like Myntra).
 - (Opt 3: They will, and we plan to sell our company to them).

Hard Questions (Level 3): 11. **The MVP:** AR development is incredibly hard. How do you test this tomorrow?

- (Opt 1: I will build a simple Snapchat or Instagram filter to see if people use it).
- (Opt 2: Manually photoshop clothes onto photos that users send me).
- (Opt 3: Use an existing open-source AR library just to prove the concept).

12. Processing Power: Real-time cloth simulation melts phone batteries. How do you fix this?

- (Opt 1: We offload the processing to cloud GPUs via 5G).
- (Opt 2: We don't do real-time video; it only works on static photos).
- (Opt 3: We heavily compress the 3D models to run locally).

13. **B2B Pivot:** Instead of getting users to download an app, why not sell the software directly to Myntra?

- *(Opt 1: That is exactly our plan; we are a B2B SaaS company).*
- *(Opt 2: Myntra takes too long to sign contracts; we need users now).*
- *(Opt 3: We want to own the customer data ourselves).*

14. **Data Privacy:** You are literally scanning people's bodies in their bedrooms. Isn't that a massive privacy risk?

- *(Opt 1: The body scan data never leaves the local phone).*
- *(Opt 2: We blur the faces before the data is sent to our servers).*
- *(Opt 3: We adhere strictly to GDPR privacy laws).*

15. **The Real Problem:** The biggest problem in e-commerce is returns (30% of clothes are returned). How much does your app reduce this?

- *(Opt 1: We guarantee a reduction in return rates by at least 15%).*
- *(Opt 2: We focus on increasing conversion (sales), not just reducing returns).*
- *(Opt 3: We charge brands based purely on how many returns we prevent).*
